APPS℮CONNECT

SAP Business One & StarShipIT Integration

Available Integration Touchpoints

Company Sync

- Customer contact and address details can be populated in StarshipIT and synced in between StarshipIT and SAP B1. It's a bidirectional sync feature. Also, after adding a customer, some customer details have been altered and these changes will be updated in either from SAPB1 to StarshipIT or vice versa via APPSeCONNECT.

Order Sync

- **Add Order**: StarshipIT orders or multichannel imported orders can be added/imported to SAPB1 sales orders with specific details i.e. billing/shipping details, items, amount paid, tax amount, shipping amount & the important feature is that it will also tell the store information from which the order came. Since it's a bi-directional sync process, therefore orders can be created in SAP B1 ERP and synced back to StarshipIT depends on customer requirements.

- **Update Order**: Orders can be updated which has already synced to SAP B1. Suppose after adding an order to SAP, one makes changes on that order like changing the item, delivery date or prices etc., it can be easily accomplished.

Delivery Sync

- Once orders are processed and labels are created from StarshipIT, APPSeCONNECT will sync them as a delivery document against their corresponding orders in SAP B1. Shipped orders from StarshipIT can be populated with package size/label/weight/tracking id and shipping status needs to be updated in SAP B1.

Seamless integration between your apps

Automate manual processes

APPSeCONNECT makes life easier for you. Seamlessly connect all your business applications and save time by automating manual processes.

Focus on Profitability

Why spend hours in doing manual work that can be automated. Instead, focus on your core business and increase your revenue.

What our customers say...

For us, the **"set it and forget it"** aspect of the APPSeCONNECT is the best part. We needed something that could run on its own and just work, APPSeCONNECT does this quite well.
