

SAP Business ByDesign & Shopify Integration

www.appseconnect.com

Available Integration Touchpoints

Customer Sync

- Online registered B2C Customer information and address details from Shopify are synced to SAP Business ByDesign as Business Partners.
- Alternately, in SAP Business ByDesign, generic Business Partners are maintained (all orders are synced against this particular Business Partner).
- B2C customers are supported using a one-time customer within SAP Business ByDesign – various orders within SAP ByDesign use the same B2C customer number. However, individual customer information and address details are stored within the respective orders. This helps each organization to capture accurate details without having the master data explode.
- Customer Sync is bidirectional, and information can be synced from SAP Business ByDesign to Shopify also.

Item & Price Sync

- Items are bi-directionally synced between SAP Business ByDesign and Shopify eCommerce. These items are listed under Shopify categories from SAP ByDesign Product Portfolio Section along with mandatory information like item SKU (material ID), name, description, dimension, other relevant processes (starting from Purchasing to Item Valuation), etc.
- Product prices are taken from the SAP Business ByDesign list price section and the same is reflected in Shopify eCommerce as base price/unit price.

Sales Order Sync

- Shopify Orders placed by web customers are synced to SAP Business ByDesign as Sales Orders.
(Items Selected, Discounts (if any), Billing and Shipping Addresses selected/entered at the time of the order are also synced to SAP ByDesign from Shopify).
APPSeCONNECT passes accurate customer information, line-item details, etc. listed in the Shopify order section to SAP ByDesign. The logistics team gets access to the orders ready for delivery using a standard delivery transaction code.
- Exact value mapping of shipping methods/freight charges is ensured for proper order total calculation while converting Shopify web orders into SAP Business ByDesign Sales Orders.

Note: APPSeCONNECT consumes data based on the APIs/Webservices. Therefore, any application, if provides proper API access to all the business features, can be connected by APPSeCONNECT, based on the API requests. Above mentioned features are the standard feature lists for Shopify eCommerce and SAP Business ByDesign integration. However, we are open to business-specific personalizations as well. Any additional business requirements or changes are treated as CRs (Change Requests) which are catered as an additional effort and will be charged according to the complexity of the feature.

Seamless integration between your apps

Automate manual processes

APPSeCONNECT makes life easier for you. Seamlessly connect all your business applications and save time by automating manual processes.

Focus on Profitability

Why spend hours in doing manual work that can be automated. Instead, focus on your core business and increase your revenue.

What our customers say...

For us, the **“set it and forget it”** aspect of the APPSeCONNECT is the best part. We needed something that could run on its own and just work, APPSeCONNECT does this quite well.

Terence McDevitt

Project Manager
Premier Research Labs
