

SAP Business One and Starshipit Integration

SAP BUSINESS ONE AND STARSHIPIT INTEGRATION

Synchronization Points

Customer

Customer contact and address details can be populated in Starshipit and synced in between Starshipit and SAP Business One. It's a bi-directional sync feature. Also, after adding a customer, some customer details have been altered and these changes will be updated in either from SAP Business One to Starshipit or vice versa via APPSeCONNECT.

Order

Add Order:

Starshipit orders or multichannel imported orders can be added/imported to SAP Business One Sales Orders with specific details i.e., billing/shipping details, items, the amount paid, tax amount, shipping amount & the important feature is that it will also tell the store information from which the order came. Since it's a bi-directional sync process, therefore orders can be created in SAP Business One and synced back to Starshipit depending on customer requirements.

Update Order:

Orders can be updated which has already synced to SAP Business One. Suppose after adding an order to SAP Business One, one makes changes on that order like changing the item, delivery date or prices etc., it can be easily accomplished.

Delivery

Once orders are processed and labels are created from Starshipit, APPSeCONNECT will sync them as a delivery document against their corresponding orders in SAP Business One. Shipped orders from Starshipit can be populated with package size/label/weight/tracking id and shipping status needs to be updated in SAP Business One.
