

How to install
magento
on **wamp server** ?
localhost/localcomputer

**PROBLEMS &
SOLUTIONS**

Database server does not support the InnoDB storage engine. The above error comes in the Configuration settings page while installing magento.

You must be using very latest version of MySQL. Actually the Magento installation code was written for older version of MySQL. From MySQL 5.6 the have_innodb variable is removed and that's what causes the error.

In the Magento file

app/code/core/Mage/Install/Model/Installer/Db/Mysql4.php

you can find the following function;

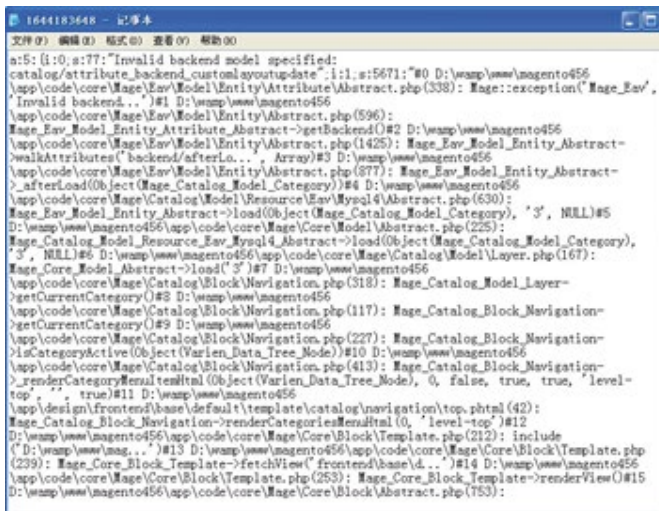

```
public function supportEngine()
{
    $variables = $this->_getConnection()->fetchPairs('SHOW VARIABLES');
    return (!isset($variables['have_innodb']) || $variables['have_innodb'] !=
'YES') ? false : true;
}
```

replace it with the following code;

```
public function supportEngine()
{
    $variables = $this->_getConnection()->fetchPairs('SHOW ENGINES');
    return (isset($variables['InnoDB']) && $variables['InnoDB'] != 'NO');
}
```

Save the file and re-install Magento.

Invalid Backend model Specified.

D:\wamp\www\magento456\app\code\core\Mage\Core\Block\Abstract.php(753):
```

I am assuming that magentodatabase is your database name

```
SELECT *
FROM `magentodatabase`.`eav_attribute`
WHERE (
`attribute_id` LIKE '%stomlayoutupdate%'
OR `entity_type_id` LIKE '%stomlayoutupdate%'
OR `attribute_code` LIKE '%stomlayoutupdate%'
OR `attribute_model` LIKE '%stomlayoutupdate%'
OR `backend_model` LIKE '%stomlayoutupdate%'
OR `backend_type` LIKE '%stomlayoutupdate%'
OR `backend_table` LIKE '%stomlayoutupdate%'
OR `frontend_model` LIKE '%stomlayoutupdate%'
OR `frontend_input` LIKE '%stomlayoutupdate%'
OR `frontend_label` LIKE '%stomlayoutupdate%'
OR `frontend_class` LIKE '%stomlayoutupdate%'
OR `source_model` LIKE '%stomlayoutupdate%'
OR `is_required` LIKE '%stomlayoutupdate%'
OR `is_user_defined` LIKE '%stomlayoutupdate%'
OR `default_value` LIKE '%stomlayoutupdate%'
OR `is_unique` LIKE '%stomlayoutupdate%'
OR `note` LIKE '%stomlayoutupdate%'
)
```

After you run these command, it will show some record. Delete all of them.

Cannot login to admin page while my username and password is correct?

Cookie issue.

Open the Varien.php file:

app/code/core/Mage/Core/Model/Session/Abstract/Varien.php

and find the following lines of code:

```
if (!$cookieParams['httponly']) {  
unset($cookieParams['httponly']);  
if (!$cookieParams['secure']) {  
unset($cookieParams['secure']);  
if (!$cookieParams['domain']) {  
unset($cookieParams['domain']);  
}  
}  
}  
  
if (isset($cookieParams['domain'])) {  
$cookieParams['domain'] = $cookie->getDomain();  
}  
}
```

Comment those lines and save the file.

The URL `http://localhost/magento/` is invalid.

Use 127.0.0.1 instead of localhost. During installation at the Database Connection page, you can see the Web Access section below. There you will get a "Skip Base URL Validation Before the Next Step" option, check it and then try to install.
